

HURRIPAK™

Periodontal Anesthetic Kit
20% Benzocaine Oral Anesthetic LIQUID

Contents:

1 fl. oz. jar HurriCaine® Topical Anesthetic Liquid - Original Wild Cherry OR Pina Colada flavor
6 disposable plastic irrigation syringes
6 disposable plastic irrigation tips

HurriPAK is a great alternative to local anesthetic injections prior to root planing and scaling or full mouth debridement. It may also be used to prevent discomfort during prophylaxis. Whether scaling an entire quadrant or an isolated area, HurriPAK allows dispensing only the amount of liquid needed, so no product is wasted. Plastic, angled irrigation tips enable effective sub-gingival application of HurriCaine Topical Anesthetic liquid and are gentle to soft tissue.

General instructions

- Do not exceed recommended dosage
- For adults and children 12 years and older
- Pull up to 3mL of HurriCaine Topical Anesthetic Liquid into the disposable syringe
- Attach a disposable tip onto syringe
- Prior to scaling and root planing, apply a small amount of liquid along the gingival margin and directly into periodontal pockets on the buccal and lingual surfaces; apply to one quadrant at a time. Anesthesia will take place within 20 seconds and last approximately 15 minutes.
- 3mL or less should be adequate for the complete scaling of all 4 quadrants
- Discard syringe and tip after use on each patient
- HurriCaine may be applied up to 4 times daily

Additional uses

For direct application during scaling:

- Prior to periodontal scaling and root planing, using a new syringe, pull up to 1mL of HurriCaine Topical Anesthetic Liquid and dispense liquid into a dappen dish. The syringe may then be filled with up to 3mL of liquid and disposable tip attached for application along gingival margin and directly into periodontal pockets by quadrant.
- Dip the scaler end into the dappen dish to coat the tip for a direct application of anesthetic during treatment. Reapply to scaler as necessary.

For irrigation to site specific application:

- Fill a new disposable syringe with a desired amount of HurriCaine Topical Anesthetic Liquid; estimate the amount needed per patient
- Attach a disposable tip onto syringe
- Irrigate along the gingival margin or into the periodontal pocket where anesthesia is needed

HurriPAK refill kits are available separately:

Includes 10 disposable syringes + 10 disposable tips – product # 0283-1107-07
